

# NETWORK and IT SOLUTIONS

## Your Systems are Only as Good as Their Infrastructure

Using the power of technology to solve business challenges through understanding, expertise, application, and integration.

### NETWORK INTEGRATION

Onepath offers consulting and integration solutions that help our clients in the strategic planning, design, building, management and maintenance of advanced communications networks. We focus not only on the immediate project but also on long-term strategic needs for improving productivity, reducing complexity and strengthening ROI. Areas of specialization include:

- IP Network design, transformation and convergence
- Network security and security-policy development
- Network and systems-operations management
- Voice-over-IP platforms
- Business-continuity planning
- Wireless planning and deployment
- Data-center design and management
- Network Project Management

### IT SOLUTIONS

The challenges associated with migration to the next generation data center are significant:

- Virtualization IT assets requires coordination and planning of shared physical infrastructure including cooling, power, cabling and racks, and space design.
- Servers, storage, and network elements also become shared assets supporting many logical applications (services) and the stakes for success (or failure) rise considerably.
- Common service events such as change management, datacenter migrations, DR, backup and archive, security, acquisitions and divestitures, and technology innovation become more complex to implement and manage.

Onepath can help identify and solve many of these challenges because of our expertise and focus on the physical shared network services. Onepath builds solutions to address the common service events including: change management, datacenter migrations, disaster recovery, backup and archive, security, acquisitions and divestitures, and technology innovation.
